

Easpring Finland New Materials Oy Environmental Policy

Easpring Finland Environmental Policy outlines how to improve environmental performance in production, use and disposal.

The environment is our top priority. Every day, in every part of our organization, we work toward our goal of zero environmental faults. We understand why and how to act safely, look after each other and proactively encourage environmental practices.

We are committed to:

- Designing products to reduce their adverse environmental impacts in production, use and disposal.
- Reducing resource consumption, waste and pollution in our operations.
- Taking a proactive approach regarding environmental legislation that affects our business.
- Requiring and monitoring our product suppliers, contractors, retailers and recyclers to adopt the same environmental principles as Easpring Finland.
- Giving appropriate weight to our Environmental Policy when making future planning and investment decisions.
- Setting targets and objectives, within the scope of the environmental management system, to achieve continual improvement and contribute toward sustainable development.
- Creating trust within the local community, environmental protection organizations and authorities through regular meetings and open communications with effective information channels for exceptional situations and transparency of monitoring.
- Advancing sustainable industrial transformation by embracing clean technologies, circular practices, and innovation in line with the EU's Clean Industrial Deal.
- Supporting Finland's goal of achieving carbon neutrality by any technically and commercially viable means.
- Identifying relevant topics and areas of our operations that have material sustainability impacts, as well as the associated risks. Reporting on sustainability, its targets and development annually. Harnessing our own expertise to oversee and support the development of sustainability. Facilitating the integration of responsibility into all our business relationships. When making decisions, considering not only financial perspectives, but also the environment, social responsibility, and good governance. Guiding the development of our operations by the principle of continuous improvement.
